-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of Species I, Claims 11-13 in the reply filed on 4/27/06 is acknowledged.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Camacho et al. in view of Few.

In regard to claim 13, the Camacho et al. reference discloses an automotive cooling system and a "used coolant replacing apparatus" (see Figure 3) comprising a "first external tank" T1 with "first hose" H1 having a vacuum pulled by pump P2 external to the tank, a "second external tank" T2 with "second hose" H2 and "valves" (1, 2 and 3); wherein each hose is connected to either the engine or the radiator and are interchangeable (see col. 7, lines 30-33), but doesn't disclose the first external tank T1 having a vacuum therein. However, the Few reference discloses another automotive coolant exchange system 30 having a "sealed first tank" 36 (see Figure 6) wherein a vacuum is pulled on it to evacuate used coolant from a vehicle engine 296. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to substitute the vacuum tank 36 for the first external tank T1 of the

Camacho et al. system as, for example, taught by Few wherein so doing would amount to mere substitution of one functional equivalent fluid evacuation device for another within the same art and the selection of any of these evacuation devices would work equally well in the Camacho et al. system.

In regard to claims 11 and 12, the method as claimed would be inherent during normal use and operation of the device.
